Education

Northwestern University

Master of Science in Machine Learning and Data Science

Evanston, IL, USA

Sep 2025 – Expected Dec 2026

National Tsing Hua University (NTHU)

Bachelor & Master of Science in Industrial Engineering & Engineering Management, GPA(4.0/4.3)

Hsinchu, Taiwan

Sep 2019 – Jun 2024

Technical Skills

- **Machine Learning & AI:** PyTorch, TensorFlow, Scikit-learn, AI agent, LangChain, RAG, NLP
- **Data Analysis & Visualization:** Pandas, NumPy, Matplotlib, Seaborn, Plotly, Tableau, Power BI, Altair, Excel
- **MLOps & Cloud:** MLflow, Kubeflow, SageMaker, AWS, Docker, Git, CI/CD Pipelines
- **Programming:** Python, SQL, R, JavaScript, C#, DAX

Work Experience

AI Engineer Intern (Industry Practicum)

Sep 2025 – Present

Land Vision

- Built an AI agent to automatically generate real estate due diligence reports by orchestrating Google Search grounding, LangGraph-based agent workflows, and MCP tool calling, reducing manual research and report drafting time by 80%
- Designed an end-to-end agentic pipeline for property, zoning, market, and risk analysis, enabling the system to retrieve, reason over, and synthesize 20+ heterogeneous data sources into structured, citation-backed reports
- Enabled faster investment decision-making by shortening due diligence turnaround from months to under 1 hour, directly supporting analysts in evaluating more properties per week and increasing team throughput

Data Analyst Intern

Jun 2025 – Present

WOOX - Global Crypto Exchange

- Built automated text analytics pipeline to process regulatory documents from 19 crypto exchanges, using text similarity algorithms that reduced manual compliance analysis time by 95%
- Developed RAG-powered conversational AI system for natural language database querying with automated validation, reducing response time from hours to seconds while maintaining 97%+ accuracy
- Created Tableau dashboards to visualize user verification metrics, conducting funnel analysis and cohort analysis to identify operational bottlenecks and trends

Selected Projects

Soccer Scout Co-Pilot — Northwestern AI Hackathon (3rd Place Winner) 🏆

Nov 2025

- Built an end-to-end ML pipeline and interactive dashboard for undervalued player discovery
- Engineered 40+ features (league strength, momentum, temporal deltas) and position-specific aging curve models, enabling granular player development analysis and improving model performance by 22%
- Developed XGBoost regression (RMSE 0.28M EUR) for next-year market value forecasting and LightGBM classification (AUC 0.90) for breakout prediction, correctly identifying 70% of undervalued and breakout players
- Integrated engineered player data with LLM to generate automated scouting reports—including breakout reasoning, undervaluation justification, and single-line actionable recommendations—reducing analyst workload by 80%+

AI-Powered Educational Analytics Platform

Feb 2025 – Sep 2025

- Built an AI tutor agent leveraging RAG and personalized student context to provide real-time learning guidance, increasing student task completion rates by 32%
- Designed adaptive feedback and hint-generation workflows that dynamically adjusted difficulty and explanation depth, reducing average student response time by 28% while improving learning accuracy

Publication

Utilization of Two Types of Feature Datasets with Image-based and Time Series Deep Learning Models in Recognizing Walking Status and Revealing Personal Identification

Oct 2024

Yun-Ju Lee, **Yu-Sen Wu**, Pu-Chun Lin

Advanced Engineering Informatics, Vol. 62, Part B, Article 102729 (Impact Factor: 9.9, Top 10% in Computer Science)
