

Yu-Sen (Eason) Wu

(341) 252-0380 | yu-senwu2026@u.northwestern.edu | <https://www.linkedin.com/in/yu-sen-wu/> | <https://easonwu.com>

TECHNICAL SKILLS

- **Hard Skills:** Machine Learning, AI Agent, Retrieval-Augmented Generation, Analytics, Automation Tools, A/B Testing, Statistical Modeling, Regression, Time Series, NLP, Feature Engineering, Data Mining, Data Modeling, ETL, Data Warehousing, Data Pipeline Architecture, AML, CFT, KYC
- **Soft Skills:** Leadership, Communication, Project Management, Problem Solving, Critical Thinking
- **Tools:** Python (Pandas, NumPy, PyTorch, TensorFlow, Seaborn), SQL, R, Java, Dart, JavaScript, HTML/CSS, Git, Docker, MongoDB, PostgreSQL, Power BI, Tableau, AWS, GCP, Git CI/CD, API Integration, n8n

WORK EXPERIENCE

KYC Analyst Intern

Jun 2025 - Present

WOOX

- Built a JavaScript/ETL pipeline to track countries' restrictions across 16 CEX + 3 DEX using GitLab CI/CD for policy-page change detection
- Automated weekly diffs detection with same-day alerts across 19 exchanges, reducing manual work by over 99%
- Built Google Apps Script visual tables to show current and prior weeks of country restrictions with comparison tables highlighting week-over-week differences
- Automated AML summary emails with Apps Script + Email API, eliminating manual updates and reducing GC review time by 90%
- Shipped an agentic RAG Telegram bot (LangChain, n8n, JavaScript, prompt engineering) integrated with PostgreSQL and APIs; provided a centralized real-time channel adopted by 2 teams (AML, Customer Service)
- Interprets questions, generates and executes SQL, and summarizes with guardrails; reduced query time 90%, eliminated manual SQL, and ensured 100% auditability

Gait Identity Recognition Data Modeling Personnel

Jul 2022 - Dec 2024

National Tsing Hua University

- Published in *Advanced Engineering Informatics (SCI, 2024)*: Proposed a novel gait recognition and personal identification approach using image-based and time-series deep learning models, achieving up to 99% accuracy across diverse walking scenarios
- Applied signal processing and binary-transform feature engineering to design a single-step gait-capture workflow, boosting identification accuracy by 31% compared to the baseline
- Built and deployed a deep learning solution on head-worn IMU data streams to detect slip patterns 0.1 s before balance loss; integrated haptic alerts and achieved 96% prediction accuracy in a field pilot with construction workers

SELECTED PROJECTS

Tutor-Matching Platform with Free AI Tutor

- Developed an AI-powered education platform combining instant problem-solving with professional tutor matching
- Leveraged Next.js, TypeScript, Firebase, and AI model APIs to support photo-based question uploads, enabling 24/7 free AI responses; reached over 100 users in the first week
- Built backend automation workflows with n8n and integrated multiple AI services to handle student queries. Reduced average response time by 80% compared to manual tutor responses
- Designed to address educational inequities between high- and low-income families. Delivered scalable access ensuring every student could receive quality learning support

Mapify - Food Map App Development

- Architected a Flutter-based food social app that parsed Instagram embedded HTML using LLM APIs, auto-geocoded addresses, and attached reviews to interactive map pins; enabled seamless user content integration and boosted engagement
- Optimized data-entry workflow by reducing manual input per spot from 3 minutes to under 20 seconds through automation; increased daily active pins by 5x, significantly improving user activity and retention

EDUCATION

Northwestern University, Evanston, IL, USA

Sep 2025 - Present

MS in Machine Learning and Data Science

National Tsing Hua University, Hsinchu, Taiwan

Sep 2019 - Jun 2024

BS & MS in Industrial Engineering & Engineering Management
