Education

Northwestern University — Evanston, IL
M.S. in Machine Learning and Data Science (GPA 3.96/4.0) — Sep 2025 – Dec 2026 (Expected)

National Tsing Hua University (NTHU) — Hsinchu, Taiwan
B.S. & M.S. in Industrial Engineering & Engineering Management (GPA 4.0/4.3) — Sep 2019 – Jun 2024

Technical Skills

- **Agents & LLMs:** LangGraph, MCP, multi-agent orchestration, agent harness design, human-in-the-loop, browser-use, LLM fine-tuning, hybrid RAG (BM25, dense retrieval, cross-encoder reranking), LLM-as-judge, hallucination and citation evals
- **Backend & Cloud:** Python, TypeScript, SQL, FastAPI, React, PostgreSQL, AWS, GCP (Vertex AI, Cloud Run), Docker, CI/CD
- **Observability & Data:** OpenTelemetry, Coralogix, MLflow, PyTorch, PySpark, BigQuery

Work Experience

AI Engineer Intern — Jun 2026 – Aug 2026
GoFundMe — *San Francisco, CA*

- Built the internal framework and CLI that turns a LangGraph agent into a deployed FastAPI service on AWS, cutting time to production from 2 weeks to 3 days
- Moved memory, guardrails, PII redaction, MCP, and local tools into a shared plug-in harness toggled by typed feature flags, so each capability is built once and every agent on the framework inherits it
- Linked OpenTelemetry traces across API, PostgreSQL, and LLM calls to Braintrust eval results, letting engineers trace a failing output to the exact prompt and retrieval step
- Outside my assigned scope, fine-tuned Amazon Nova Pro model for share-text generation on 200+ curated examples; it's score matched GPT-5.6-Terra on a eval suite I built, at a projected 80% lower inference cost

AI Engineer Intern — Sep 2025 – May 2026
Land Vision – Real Estate Due Diligence Platform — *Chicago, IL*

- Turned a 3-month due diligence process into a 1-hour first draft with a LangGraph planner that splits each property into zoning, environmental, and flood checks, run in parallel via MCP tools I built over 20+ sources
- Built the zoning knowledge base with a browser-use agent that finds and parses each jurisdiction's municipal code, using BM25 + dense retrieval with reranking to match exact district and section numbers
- Built a human-in-the-loop review gate: each risk finding is checked against its cited passage, and unsupported or low-confidence findings pause the LangGraph run for analyst approval before delivery
- Owned the production rollout. Built the React UI and authenticated REST API, and set up CI/CD to GCP Cloud Run with Vertex AI serving

Data Analyst Intern — Jun 2025 – Aug 2025
WOOX – Global Crypto Exchange — *Taipei, Taiwan*

- Saw teams waiting 3–5 days for cross-department data and built a self-serve analytics agent on my own initiative, turning plain-English questions into verified PostgreSQL queries and grounded answers in 2 minutes at 98% accuracy
- After a safety review with the data and SRE teams, extended the agent to run the legal team's user compliance funnel analysis, maintain 6 internal dashboards, and send C-level executives an automated daily report
- Automated monitoring of policy pages across 19 competing exchanges, scrapers on GitLab CI/CD ignore dynamic page noise, and an LLM summarizes real changes for the compliance team, replacing hours of weekly manual review

Founder — Feb 2025 – Present
Pepper Tutor Matching – Tutoring marketplace with free AI tutors — *Remote*

- Founded and built a tutoring marketplace that has onboarded about 300 tutors and matched 100+ families; now revenue-generating, with 15% of revenue donated to rural education programs
- Run the business as a solo founder with a multi-agent team on Grok covering daily operations, marketing, and product development, under safety rules, cross-agent review, and human-in-the-loop approval for high-stakes actions
- Built free AI tutor agents for students who cannot afford tutoring; they guide with hints instead of giving answers and remember each student's weak topics, serving 1000+ students

Selected Projects

Agentic RAG for Radiation Oncology – *Northwestern Medicine Capstone* — Sep 2026 – Present

- Unified 400 de-identified cases across 14 disease sites into one SQL schema and built similar-patient retrieval that fuses clinical-variable similarity with semantic search over physician notes, with matches reviewed by oncologists
- Extended a guideline-only RAG platform (ASTRO, NCCN) with an agent that searches guidelines and similar cases in parallel, cites both, and flags conflicting or low-confidence evidence in the UI for physician review
- On 40 physician-graded cases vs. the prior RAG, cut hallucinations from 28% to zero, raised verifiable citations from 48% to 95%, and lifted accuracy from 2.75 to 4.8 out of 5
